FRAMESHIFT / THE PRACTICAL DESIGN LIBRARY

Real Apartment Bedroom Makeover

A room-by-room design brief and contractor planning workbook

Based on FrameShift's actual pink-bedroom design study. In the visualization, original ceramic floor tiles, ceiling geometry and window air conditioner remain. The built-in wardrobe, improved lighting and new finishes are proposals—not a record of a completed renovation.

- □ WHO THIS IS FOR: homeowners, tenants seeking permission, design clients and people preparing to interview contractors.
- □ WHAT IT IS: an educational planning resource with a clear brief, staged questions and printable worksheets.
- □ WHAT IT IS NOT: an engineered drawing set, statutory approval, DIY method statement, permit, warranty or proof that the filmed work actually happened.

Version 1.0 | 13 November 2026 | frameshift-transformations.onrender.com

Start with the brief

Complete these fields before requesting quotations. Work quality improves when every contractor is pricing the same scope.

Project address / city	_____
Owner / landlord permission	_____
Project goals (top 3)	_____
Existing problems / damage	_____
Budget ceiling and currency	_____
Target start / completion	_____
Must-keep features	_____
Decision maker / contact	_____

Universal pre-project checklist

- □ Identify the exact property and intended use; confirm whether you own the property or need landlord, homeowners' association or building-management consent.
- □ Take clear dated before photos, measure dimensions, note door/window clearance, and record existing damage or moisture problems.
- □ Obtain at least two itemised written quotations with materials, exclusions, schedule, payment milestones and warranty information.
- □ Check the relevant authority and building rules for the actual location. Online US or European references are useful questions to raise, not automatic local legal requirements.
- □ Never treat an AI video as documentation that any work was physically performed, inspected or tested.

1 / Lock the real room

□ Photograph the room from at least two opposing corners. Record door swings, window sizes, ceiling details, outlets, the existing AC and the ceramic floor layout.

□ Measure wall spans, floor-to-ceiling dimensions and service clearances. Check furniture paths and window opening access.

□ Document the condition of the pink textured coating and any dampness, cracking or failing adhesion. Diagnose moisture before painting over symptoms.

□ Keep the window AC position, access for maintenance, air path and ventilation clear unless a qualified HVAC professional approves changes.

2 / Choose a coherent design brief

□ Set two or three priorities: calm visual palette, sensible closed storage, better task lighting, budget and cleanable finishes.

□ Choose samples under natural and warm night lighting; check how blush/taupe, sage and cream interact with the existing floor and windows.

□ Make a dimensioned wardrobe and bed layout before commissioning custom joinery; check doors, sliding tracks and drawers with full clearance.

□ Specify easy-clean materials, anchoring methods, edges, hardware and a realistic delivery lead time.

3 / Work sequence to discuss with contractors

□ Remove personal items and furniture; protect the existing ceramic tiles and seal the work area against dust.

□ Assess coatings and substrate. Contractor to choose the preparation, repairs and compatible skim-coat/primer/paint system; allow documented dry times.

□ Have a competent electrician isolate and test lighting circuits before replacement and complete the final electrical safety checks.

□ Finish dusty wall and tile-grout repairs before installing the final wardrobe; protect the floor during joinery.

□ Install, level and safely secure the wardrobe to appropriate substrates using product instructions; check clearance, ventilation and tip-over risk.

□ Fit final light, curtains, headboard and furniture; clean the room, remove protective covers and confirm AC operation.

4 / Health, durability and safety

□ Use source control for sanding dust, ventilation appropriate to product labels, and building rules for any suspected hazardous coating.

□ Ask for low-odour/low-emission indoor finishes, cure periods and occupancy/ventilation instructions from the products used.

□ Heavy cabinetry, shelving and televisions require suitable anti-tip/secure fixing details.

□ Protect electrical sockets from plaster/paint and verify accessible isolation, functional lights and outlets at handover.

5 / Handover and content transparency

- □ Keep receipts, warranties, paint codes, joinery plans, professional signoffs and a before/after photo set.
- □ Check sliding doors, anchor stability, under-bed cleaning, curtain operation and unrestricted AC airflow.
- □ Record defects and follow-up dates in writing. Do not market an AI-rendered room as an actual physical renovation.

Budget worksheet

Enter your local quotes and currency. No prices here are represented as accurate quotes for your location. Add a contingency suitable to the project and seek professional advice on unforeseen conditions.

Category	Quote / currency	Notes / exclusions
Measurements and design	_____	_____
Protection and clearing	_____	_____
Wall preparation and skim coats	_____	_____
Primer and painting	_____	_____
Electrician and new light fitting	_____	_____
Floor tile cleaning / regrouting	_____	_____
Wardrobe design and installation	_____	_____
Bed and soft furnishings	_____	_____
Curtains, rug, storage and decor	_____	_____
Contingency	_____	_____
TOTAL	_____	_____

Ask the contractor before signing

- □ What is the safest wall-prep approach for the existing textured paint?
- □ How will you protect floor tiles, belongings and indoor air quality?
- □ How will cabinets be anchored without obstructing the AC?
- □ What lighting electrical work needs an authorised professional?
- □ What defects, warranties and cure times are expected?

Quote comparison

Contractor A / price / dates	
Contractor B / price / dates	
Scope difference / exclusions	
Licences / insurance checked	
References checked / follow-up	
Chosen contractor / why	

Before you sign off

- □ Scope and variations are itemised in writing
- □ Approval and technical signoffs appropriate for the site are collected
- □ Photographs and receipts for concealed or regulated works are retained
- □ Owner receives product manuals, maintenance instructions and warranties
- □ Defects list and remedy date are agreed
- □ Final payment milestones and retention are clarified in the signed contract
- □ AI-concept imagery is never used as evidence of work carried out

Important scope notice

Different countries and municipalities use different codes, licences, permit processes and construction standards. The cited reference materials are educational starting points, not a statement that a particular standard legally governs your project. Structural, electrical, excavation, fall protection and water-safety decisions must be approved and performed by appropriately qualified local professionals.
